# how to use BENDANA

## TOTAL PROTECTION

PATENTED

While the animal is still sedated, with a soft meter measure the circumference of the chest

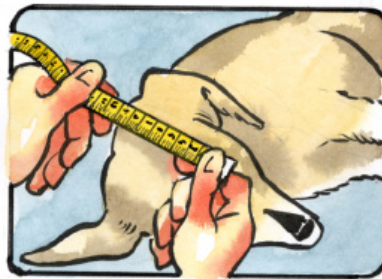

Depending on the measurement (approximately -20%) choose the appropriate BENDANA size

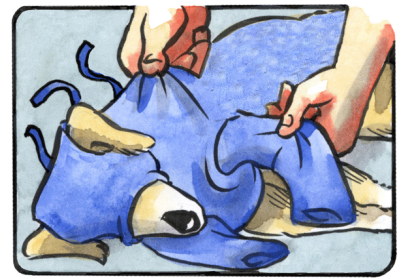

Measure the length of the legs added to the width of the animal's chest (passing under the chest)

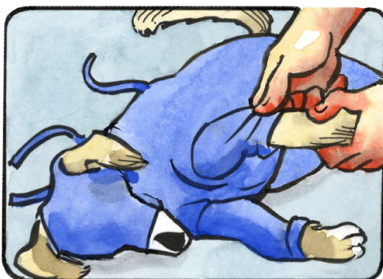

Mark half of the just measured length and shorten the tubular elements accordingly

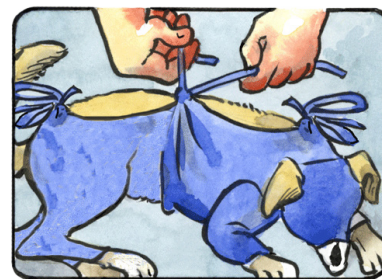

Check the width of the ears and, if necessary, widen the two half-moon holes

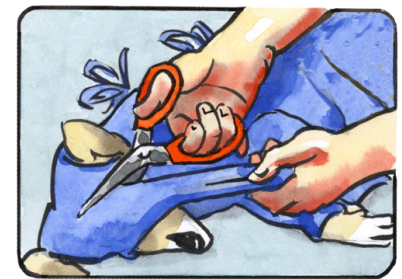

Insert the protection from the head leaving the ears free

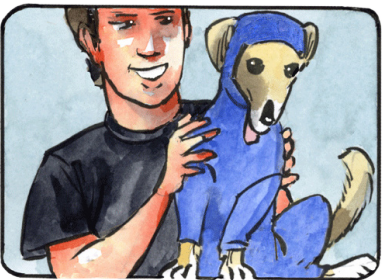

Insert the front and rear legs into the tubular elements

Lace Bendana up on the back

Cut the excess protection and discover the whole snout, or create two holes for the eyes

Upon awakening, the animal will be perfectly at ease and protected thanks to BENDANA!

- Removal of cutaneous masses and nodules
- Abdominal surgery (e.g. enterotomy, splenectomy...)
- Shoulder/elbow surgery (e.g. dysplasias, OCD...)
- Thoracic surgery (e.g. lobectomy, pericardiotomy...)
- Hip/knee/pelvis surgery (e.g. dysplasias, dislocations, traumas...)

MADE IN ITALY

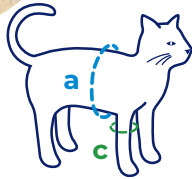

# BENDANA

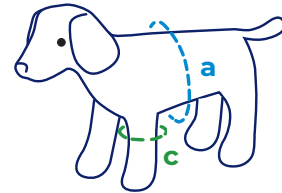

It is a post-operative protection for veterinary use, designed to completely cover the dressings in a safe and lasting way, leaving the animal absolute freedom of movement and eliminating any annoyance caused by the use of plasters, velcro and so on. It is a very simple to use elastic bandage, adaptable in a few steps to any breed and size, easy to remove even for routine checks during convalescence. It is made of natural jersey fabric ( $\geq 90\%$  cotton e  $5\div 10\%$  elastane). Produced in various models, in different shapes and sizes depending on the part of the body to be protected, it is supplied in two solutions: as shaped articles ready for use and, for the most experts, as a continuous straight protection, to be cut as required.
